CLIENT FEEDBACK

Name of Client and organization:

David.

HH Fitness Studio

Name of Student/s:

Pan Jiayao

Chen Jialing

Ye Fuying

Liu Yibin

Thank you for acting as client for this Research and Development Project. Now that the project is nearing completion we would like some feedback that will assist the team or students in their future development. It is important that we gain feedback about the aspects of the work that were done well and also suggestions for improvement. Please comment the team as a whole and where it is possible the individual students.

This feedback will be used by the assessors to complete a picture of the student's performance during the project, and by the students to reflect on their performance during the project and in assessing their future development needs.

THE PROJECT

Could you please comment on the results of the project? To what extent did the student/s achieve the agreed outcomes?

I'm still satisfied with the results of this project. It records food only by taking pictures and calculates its energy (in Calories). At the same time, it can simply analyze the daily diet and recommend some future menus. These are the results we have agreed upon, and they are all satisfied.

How well did they go about completing this work?

Everyone on the project team is very active and fully involved in every activity. For new knowledge, they take the initiative to learn through the Internet and books. When confronted with problems they don't understand, they can all come up with them and discuss them together to solve them. They can communicate with our organization in a timely manner and have a sincere and friendly attitude. They can also do their best to meet the needs of our organization.

What suggestions do you have for improvement?

hope this app can recognize more kinds of food by taking photos, and I hope this app can recognize food more accurately. In addition, it is hoped that this app can calculate the total daily intake of energy (in Calories).

How did the student/s contribute added value or provide professional expertise to your organization?

The guests in our organization are people who want to keep fit or lose weight. The application developed by these students provide our guests with a good tool to record

their daily diet and make them have a healthier lifestyle. To a certain extent, the help us attract more customers and improve the revenue of our organization.

In what ways did the student/s show initiative in learning about the wider aspects of IT professional practice?

These students will never give up when they encounter difficulties. They will always find ways to solve them. Even if they are not familiar with the requirements of our organization, they will supplement their professional knowledge through online learning and reading books.

PEOPLE SKILLS

In what ways did the student/s adapt to the situation and develop and maintain professional working relationships appropriate to your organization?

Students and our organizations share the same ideas about healthy life. In addition, they are aware of the shortcomings of some applications on the market, especially the inconvenience caused by manually entering food. They also think it is necessary to develop an application that can record diet by taking pictures. Moreover, they have the ability to develop an Android application.

In what ways did the student resolve conflicts and manage and deliver to the sponsor's expectations?

Faced with conflicts, these students can control their emotions and solve problems with a calm attitude. When they find themselves making mistakes, they can admit and apologize to others in time. Even if there are disputes, other members of the group can help to regulate the atmosphere and avoid more conflicts.

For the sponsors' expectations, these students do their best to accomplish the task. When confronted with problems they do not understand, they can also learn in time to ensure the smooth completion of the task.

OVERALL SKILLS

How did the students' skills and abilities develop during the project?

During the project, the students have the skills and abilities to develop an Android application. They mastered the technology, like Machine Learning, especially for Deep Learning. They also known the knowledge of CNN.

What advice would you offer this team or each of these students for their professional development?

I hope this team will learn more technology. They will not only learn the latest popular technology, but also learn some widely used common technology. In this way, their development will be more convenient and smooth in future work.
