Usability testing report

for UI version_2.0

Participants

Skye. A senior student who pays attention to her daily diet.

Moly. A housewife who has three kids and cooks meals for her kids.

David. A old people who exercises in the park every day

Vivian. A student whose major is computer science and technology.

Justin. Vivian's father who is a hotel chef.

Emma. Vivian's sister, a staff in a food company.

Steven. A senior web developer.

Cindy. An teacher who is very busy.

Jean. A CJLU student who mayors in food chemistry.

Jane. A small company owner who pays attention to keep in good health.

Findings

Positive findings

1.Simple interface and convenient operation

David: For my seniors, many app operations are too complicated. And our app interface is very simple and easy to operate, it is suitable for our elderly.

Steven: The app's design is simple and generous, and will be popular with people of all ages.

Jane: keeping everything simple is always the best choice, including for design.

Vivian: the interfaces are clear and good, they make me feel comfortable

2. Diverse functional interfaces

Skye:I especially want an app that can recommend recipes and can record daily diets, which helps my healthy life.

Moly:I have to worry about what to do with my three sons every day. With this app I can make different meals every day.

Emma: This app evolves in line with the trend, and it will become an inseparable application for many people in their daily lives.

Cindy:I have a busy life every day, and I don't have time to record my daily diet. With this app, you can record your daily diet as long as you take a photo, without spending too much effort and time. This software is very suitable for me.

Negative findings

1. Missing a navigation

Jane:When I want to change another function interface, I must return to the main interface, and then click to enter the desired interface, I think this is a bit inconvenient.

Next Steps (for further and future development):

To add a navigation to our UI design.
